GPG Information Security Policy Statement

The Management and employees of Global Procurement Group are committed to preserving the confidentiality, integrity, and availability of the physical and electronic information assets managed by the company, to preserve alignment with corporate goals and reduce the information-related risks to acceptable levels.

As a means of fulfilling these commitments, Global Procurement Group established and maintains an Integrated Management System (IMS) in line with the ISO/IEC 27001:2022 international standard, to:

a) establish, implement, maintain, and continually improve the information security management system, and
b) assess and treat information security risks tailored to the needs of the organisation.

Global Procurement Group has adopted Information Security objectives and performance parameters that reflect the effectiveness of the IMS. These objectives and performance parameters apply to all operations of GPG, including internally developed information systems, and shall be monitored to demonstrate continual improvement of the IMS. The control objectives are designed to be supported by specific, documented policies and procedures where appropriate.

All employees of Global Procurement Group, as well as third party service providers, are expected to comply with the IMS. Any significant non-compliance of the IMS will be considered a breach, inviting suitable action.

The Information Security Oversight Committee and top management of Global Procurement Group are committed to driving compliance to the IMS.

This policy statement, IMS, and associated procedures will be reviewed on an annual basis.
